Professional Summary

Enthusiastic and motivated Full Stack Developer with a strong foundation in Python and Django. Eager to contribute my skills to a dynamic team and develop robust web applications.

Specialization

- Python
- Django REST framework
- Javascript
- API development
- PostgreSQL
- Git

Projects

- **Social Media app (Computer Science)**
  An Instagram Clone made using JavaScript, HTML, CSS as Frontend and Python, Django for building Backend logic.

- **Remote Gas Detection System (Electronics)**
  An IoT device using an Arduino UNO as its heart and connected to some gas detecting sensors. All the readings are sent to a receiver mobile number using a GSM SIM900A Module.

Education

- **Masters of Science in Electronics**
  West Bengal State University
  2021-2023

- **Bachelors of Science in Physics**
  West Bengal State University
  2018-2021

Achievement

- Completed Hacktoberfest 2023 challenge, contributed in two open-source repositories.

  1. Bulkmailer: A Django based backend system for bulk mailing using PostgreSQL, Celery, Nginx, Gunicorn, and deployed on a virtual machine.

  2. NeoGPT: NeoGPT is an open-source, locally-run Language Model (LLM), revolutionizing the way we interact with documents, YouTube videos, and more.

Certification

- Programming Data Structures and Algorithms using Python - NPTEL

- Developing Applications with SQL, Databases and Django - Coursera
